Chiropractic Imaging

radiology SA

The Philips MD ELEVA Spine Package provides accurate reproducible erect full spine images without the need for filters. By stitching together a series of small automatically exposed images the correct image density is achieved for the whole spine. Extra radiation with old technology due to exposure or filter placement issues are virtually eliminated. A table level calibration ruler is included in the image to ensure accurate length measurements can be made. Regions of pathology can be filmed separately if needed to provide additional detail.

- Radiologist always on site
- Bulk billing for all pensioners and health care card holders
- Same day appointments
- Low dose technology

Images Online

Our staff can set up your computer so that the images can be seen as soon as they have been performed. This requires a good internet connection, otherwise is a totally free service and easy to use. Please email radiologysa@radiologysa.com.au for more information or installation.
